NTU Names — UI handoff template

NTU Names · Decentralized .ntu Domain Registrar

PROTOTYPE · DEMO DATA ONLY

A clean, clickable-flow reference for the .ntu registrar project

Use this deck to edit screen mockups, annotate navigation, and hand off the intended behaviour to your developer.

How to use this template

Import the PPTX into Canva and edit each slide. Add arrows or numbered labels to show where each button navigates. Replace sample domains and balances with clearly labelled demo data.

Design system

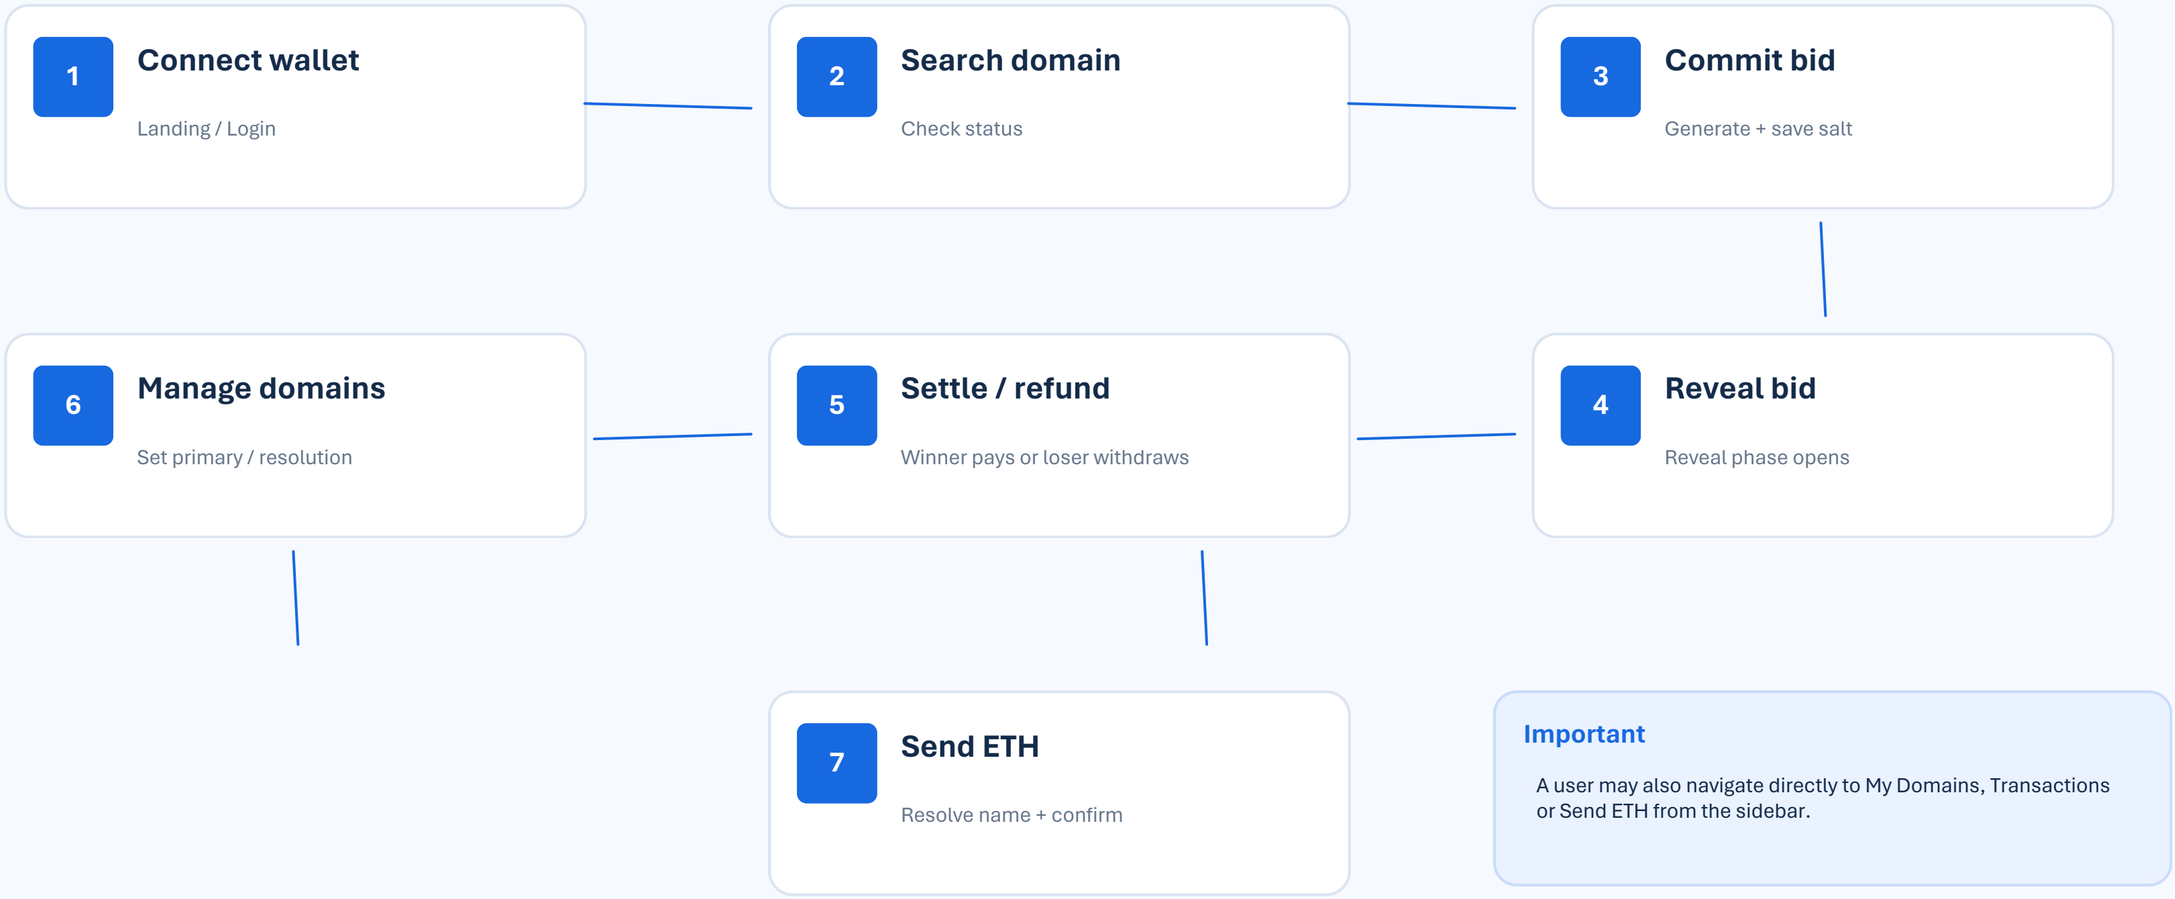

- Primary blue
- Navy text
- Pale blue
- Background
- Border grey

All interactions, balances, countdowns and transactions shown are illustrative until implemented and tested.

01 · User journey map

Handoff overview · edit the labels and arrows to match your final design

PROTOTYPE · DEMO DATA ONLY

Important

A user may also navigate directly to My Domains, Transactions or Send ETH from the sidebar.

12 · Developer handoff checklist

NTU Names · Decentralized .ntu Domain Registrar

PROTOTYPE · DEMO DATA ONLY

Use this slide as the final implementation brief.

- [ ] Connect MetaMask; show connected account and network.
- [ ] Search .ntu name and display status from contract state.
- [ ] Commit bid with exact contract-defined hash encoding.
- [ ] Generate, back up and later restore reveal salt securely.
- [ ] Reveal only during the valid reveal phase.
- [ ] Handle winning settlement and losing-deposit withdrawal per contract rules.
- [ ] Manage resolution and primary name with owner checks.
- [ ] Resolve .ntu names before sending ETH; show destination address.
- [ ] Use on-chain timestamps and transaction receipts for status.
- [ ] Keep demo mode clearly separate from live blockchain actions.

Security boundary

Never request private keys or seed phrases. Do not invent a contract address or claim security without tests/review. Frontend countdowns and mock statuses are not authoritative.

Own your identity on-chain.

Register, manage and resolve .ntu names using a compatible Ethereum wallet.

Connect MetaMask 

Never enter your seed phrase or private key.

Commit bid

example1.ntu · Commit phase

Place a hidden bid before the commit deadline.

Bid amount (ETH)

0.50 ETH

≈ 1555.68 SGD estimate (indicative only)

Salt / secret backup

Generate random salt

Commit bid

Never lose the salt: the reveal step must use the exact committed domain, bid and salt.
